

# CortexRM™

## Features & Benefits

- Upgrade bar code reader firmware across your entire enterprise on your schedule
- CortexRM™ is designed to work with your remote management software used to manage additional equipment in your facility
- Check the battery life, serial numbers, firmware version and more
- Send configuration files to enable or disable features
- CortexRM™ works with either Bluetooth® or tethered Code readers
- Compatible with Windows® 7 or Windows® XP operating systems

## Overview

CortexRM™ is a remote management tool designed to give the IT department the ability to manage a fleet of Code bar code readers from a single location, by using the same tool, or tools, already being used to manage other hardware devices deployed across an enterprise. CortexRM™ gives instant visibility and control of a bar code reader, no matter where it is located or how it is connected.

The battery life, serial number and even the firmware version of a reader can be obtained with the push of a button. In addition, CortexRM™ allows administrators to seamlessly download firmware, configuration settings and more to a single reader, groups of readers, or all readers within a network at once.

CortexRM™ can be used with Code's tethered or Bluetooth® enabled readers, and allows administrators to monitor the performance of a reader that will ultimately reduce the time, cost, and on-site service calls associated to reader management, and will significantly increase reader up-time, efficiency and performance.

## Specifications

Operating System Compatibility	Windows XP and Window 7
Code Reader Compatibility	CR900FD, CR1000, CR1400, CR2500, CR3500, CR8000
Uploadable to Reader File Types	Firmware, JavaScripts, Configuration Files
Downloadable from Reader Info	Serial Number, Battery Life, Model Number, Firmware Number
Code Reader Communication Interfaces Supported	Bluetooth®, USB Keyboard, USB HID, USB VCOM, RS232
